

Agile testing at XING

Anastasia Chicu

the blame game

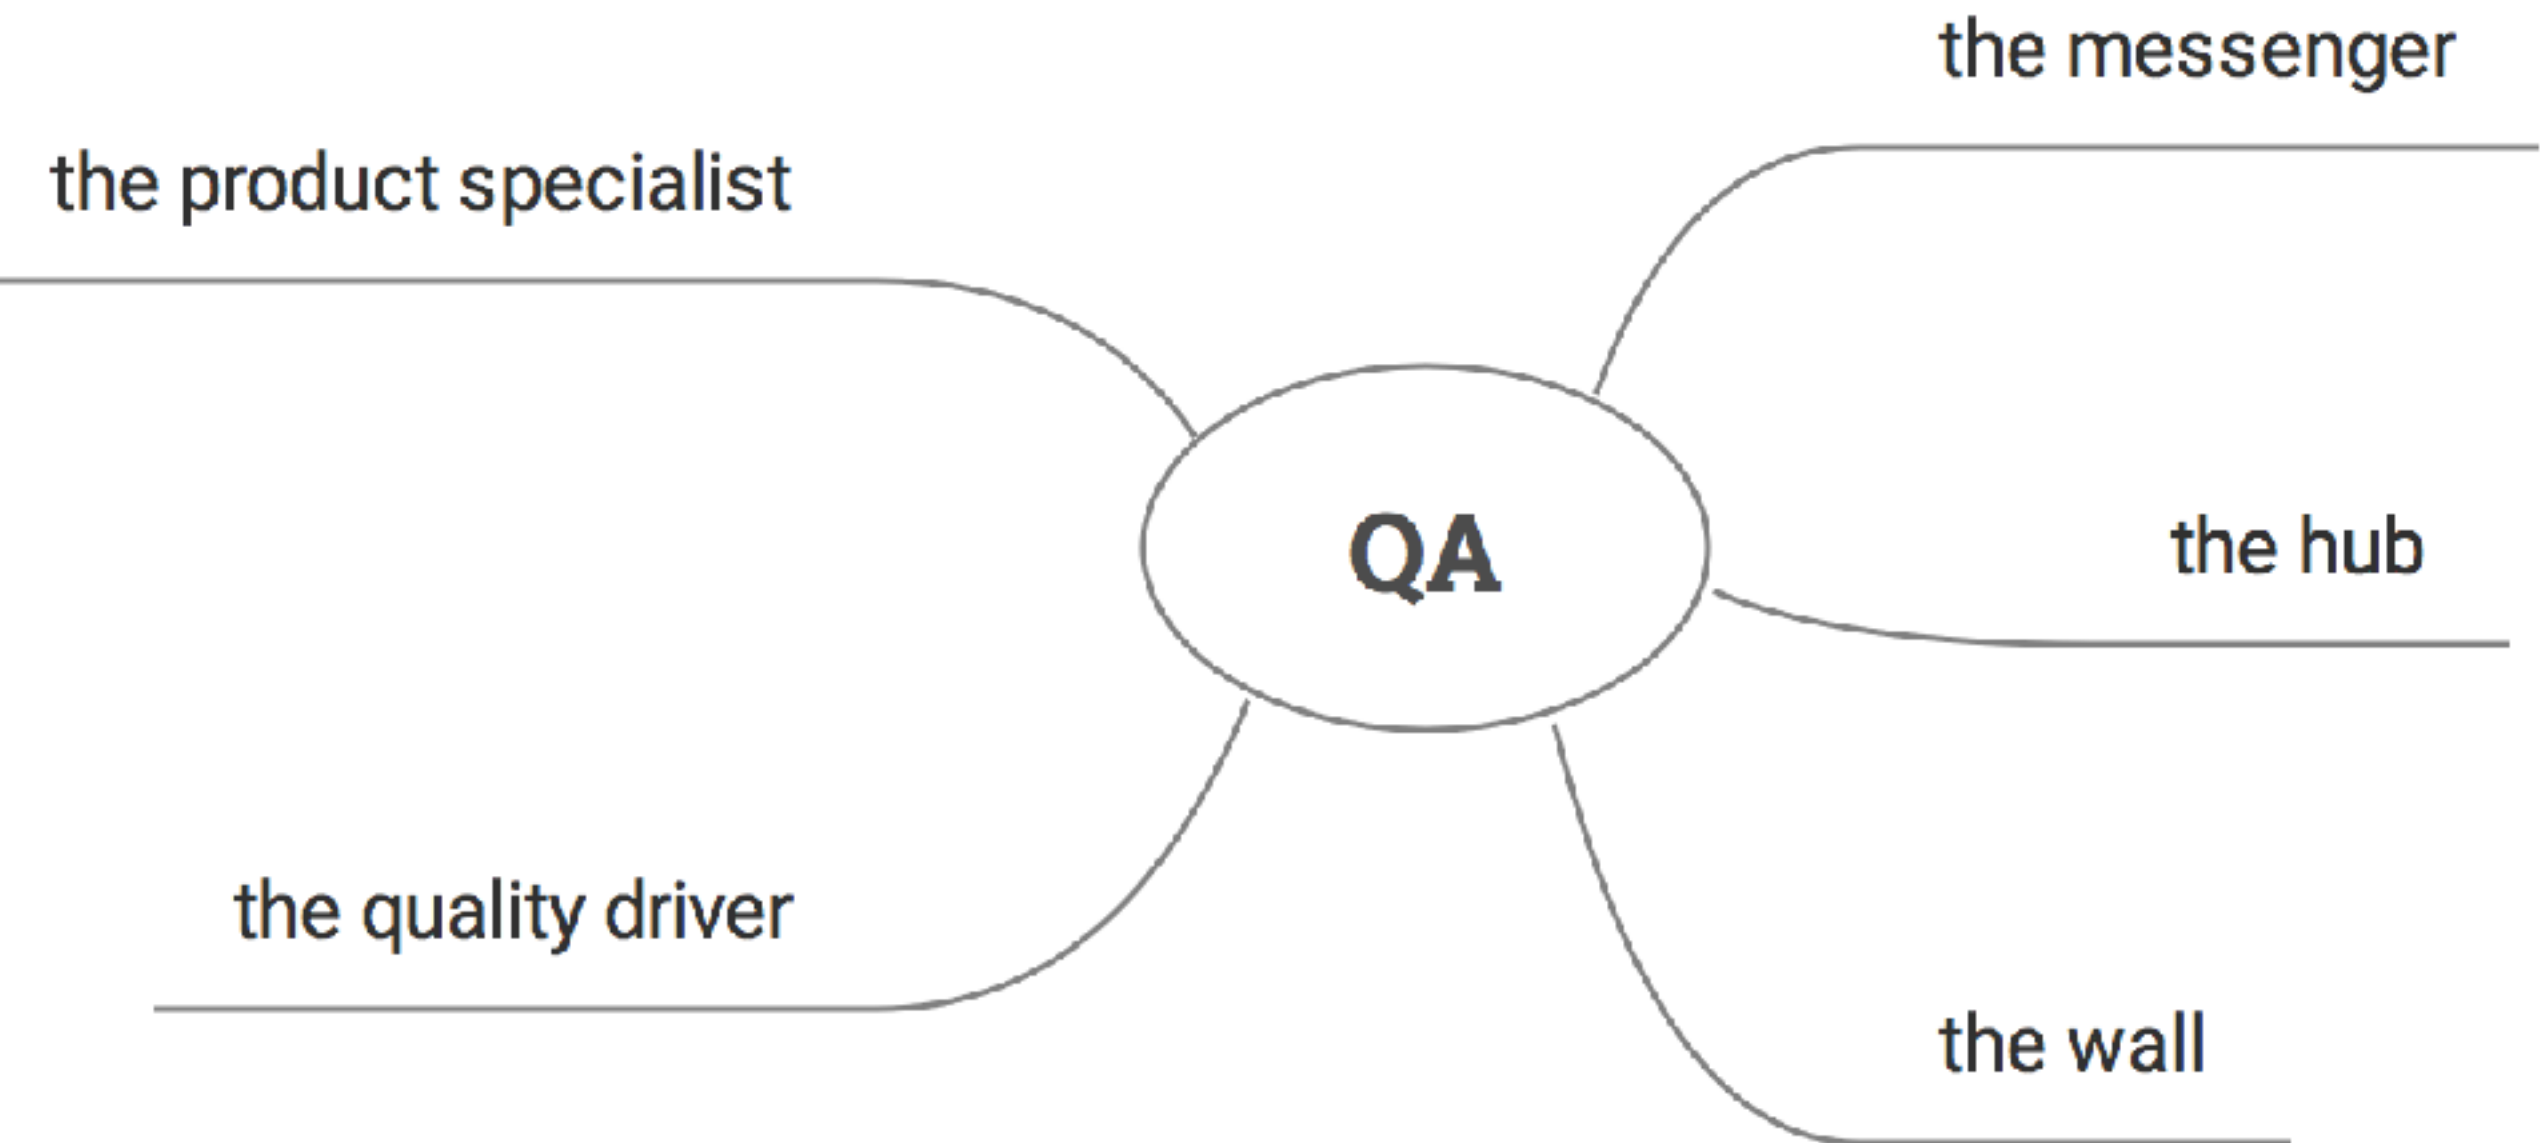

the QA as the documentation producer

- test strategy
- test plan
- test cases
- entry and exit criteria
- pass/fail reports
- metrics (bugs/qa, bugs/iteration, bugs/requirement, effect slippage ratio, execution percentages per build..)
- release notes

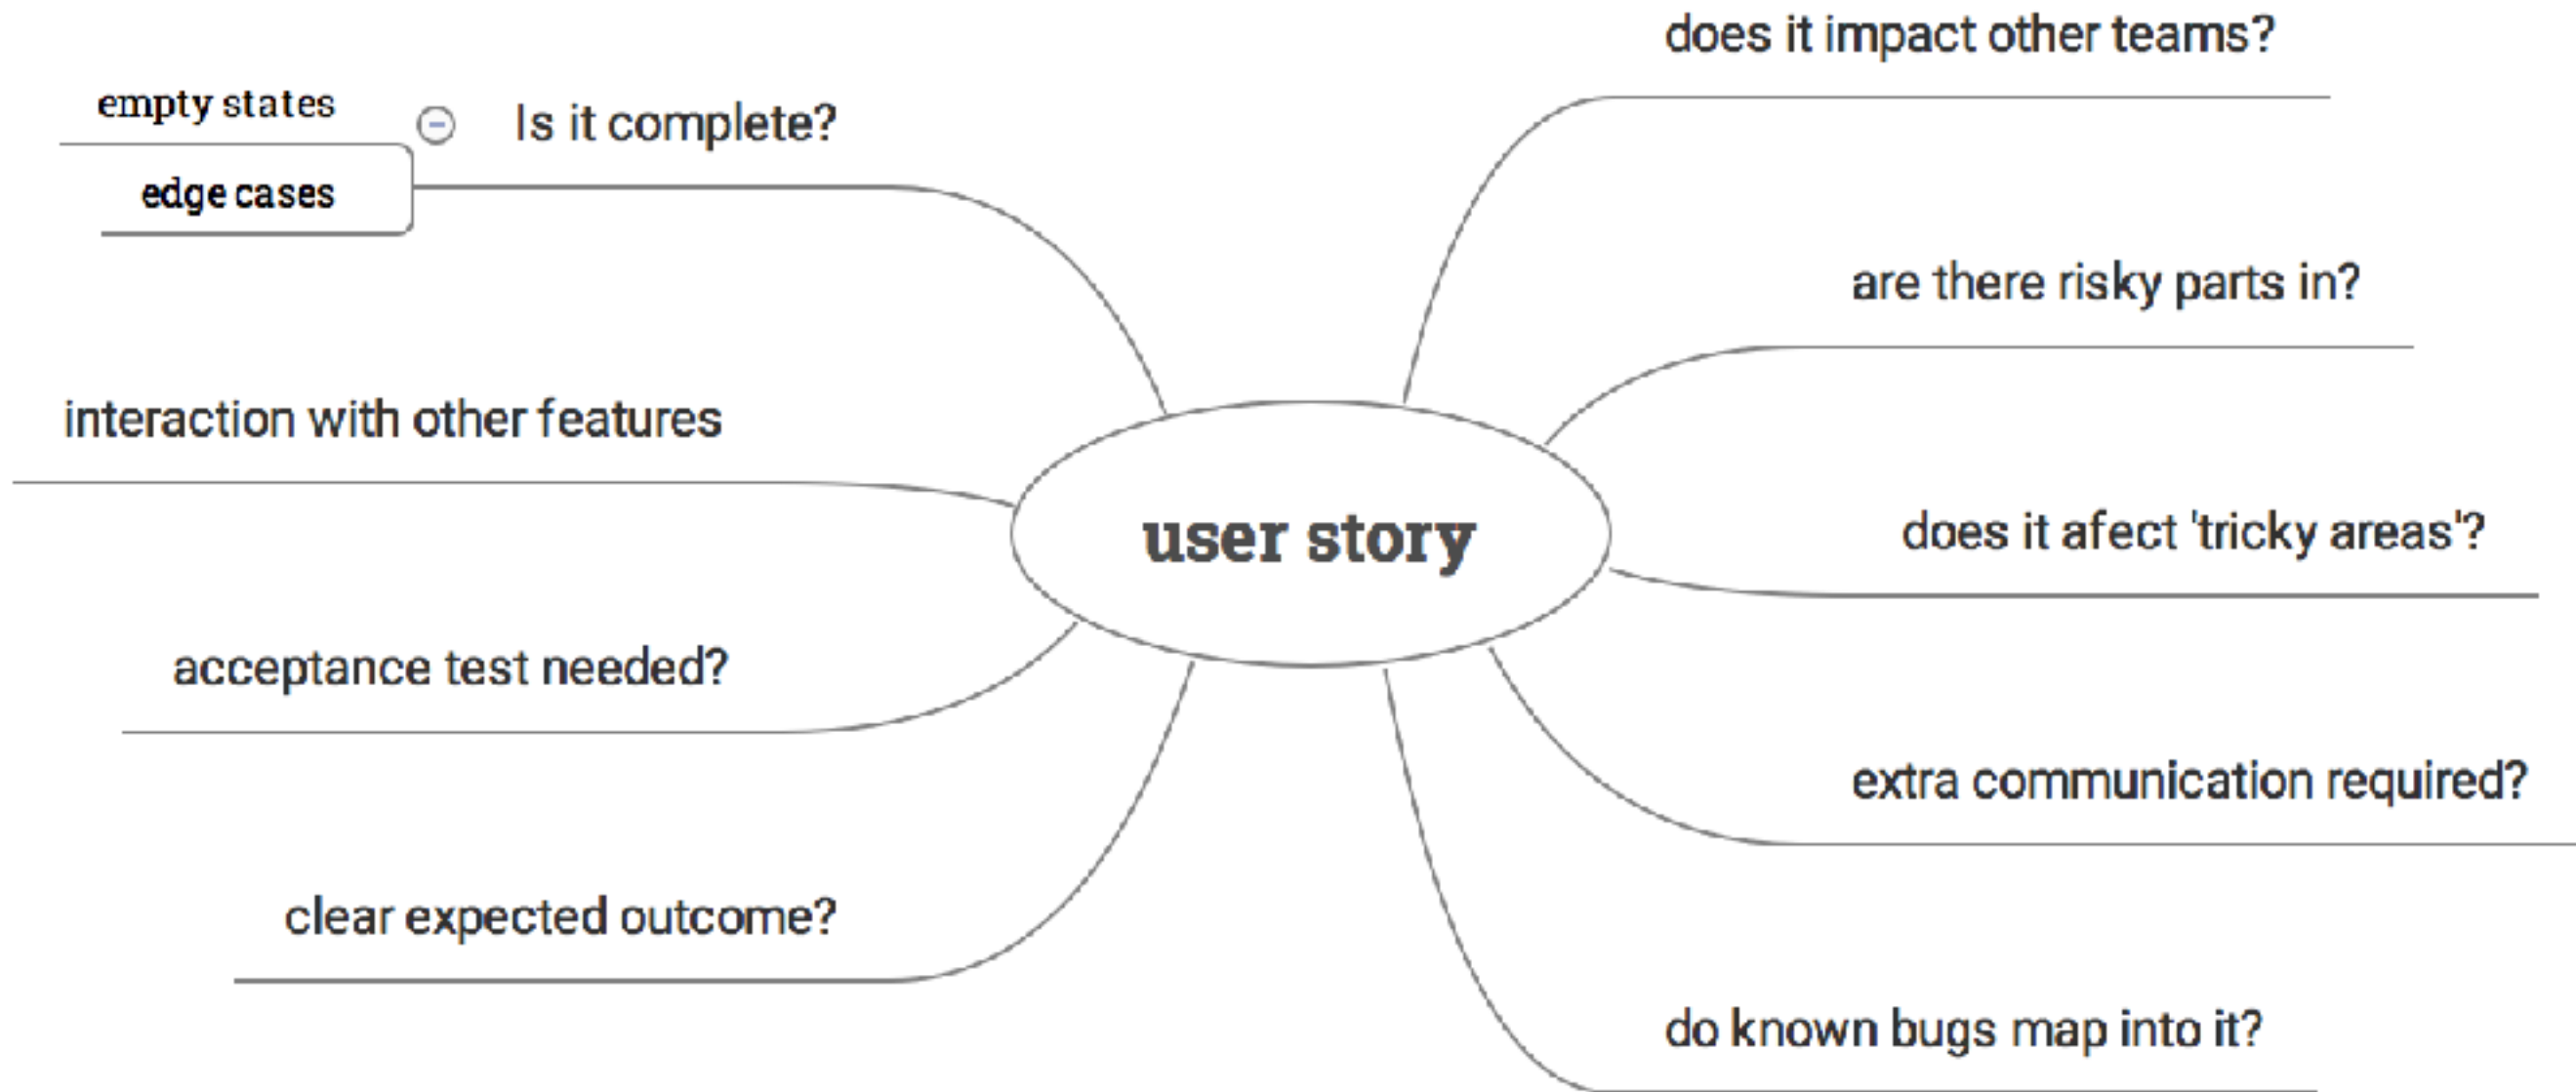

expectations

the QA as the product specialist

- know product upside down with edge cases
- identify problem areas
- be pessimistic: ask question to make risk surface

Grooming mindmap

the QA as the quality driver

- test new features and say no if necessary
- coordinate big testing efforts : 'release testing'
- drive AT
- drive effort on improving the test infrastructure
- drive test automation effort

REPLO Guestlist Teaser

TEST SCENARIOS

- check teaser for public guestlists ✓
- check teaser for private guestlists ✓
- check guestlist which is visible only to organizer ✓
- check attendee with private profile ⚠ check that the pic is gender-specific ✓
- check attendee who has been invited per mail ✓
- check blacklisted users (nobody picture should be displayed) ✓
- check for no users on guestlist yet (no attendees) ✓
- check if all RSVP 'no' or 'maybe' (teaser should not be displayed (for 3, 8, 10 invited users) ✓
- check the list for 1 attendee (no teaser) ✓
- check the layout for 7,8,9, 10+ attending users ✓
- change RSVP and make sure the list is updated ✓
- check after uninviting users from the guestlist (teaser should be updated) ✓
- check for organizers attending their own event (with private and non-private profiles) ✓
- check pic changes ✓
- check behaviour on click ✗ is different from the description, but is ok (sandbox behavior as discussed with Yuliya)
- check behaviour on hover ✗ there is no hover behavior specified nor implemented
- check that after login, data on the teaser matches the LO version. Make sure users sees p2m (as we are promising him) ✓ [almost matching, not in order but it is ok as discussed with Ana]
- TR
- cross-browser ✓ tested on Chrome and Firefox

Avoid running into traditional testing

- reduce hand-offs : integrate testing efforts
- agile teams are test infected (colocation, jira, github)
- PR review process
- testing rituals

the QA as the wall

- triage bugs
- aggregate the 'noise' and transfer it to actionable tickets
- run impact analysis
- set priorities
- know whom to talk to

Details

Type:	Bug	Status:	CLOSED (View Workflow)
Priority:	Undefined	Resolution:	Fixed
Affects Version/s:	None	Fix Version/s:	
Component/s:	None	Security Level:	Internal Members (All internal Groups)
Labels:			

Description

Member XXX is very angry. He cannot invite guests

He wrote:

"Es können keine Teilnehmer eingeladen werden. Mehrmals versucht, geht nichts mehr."

The member will pay his invoice, when the problem is resolved. I need a solution asap. THX.

Attachments

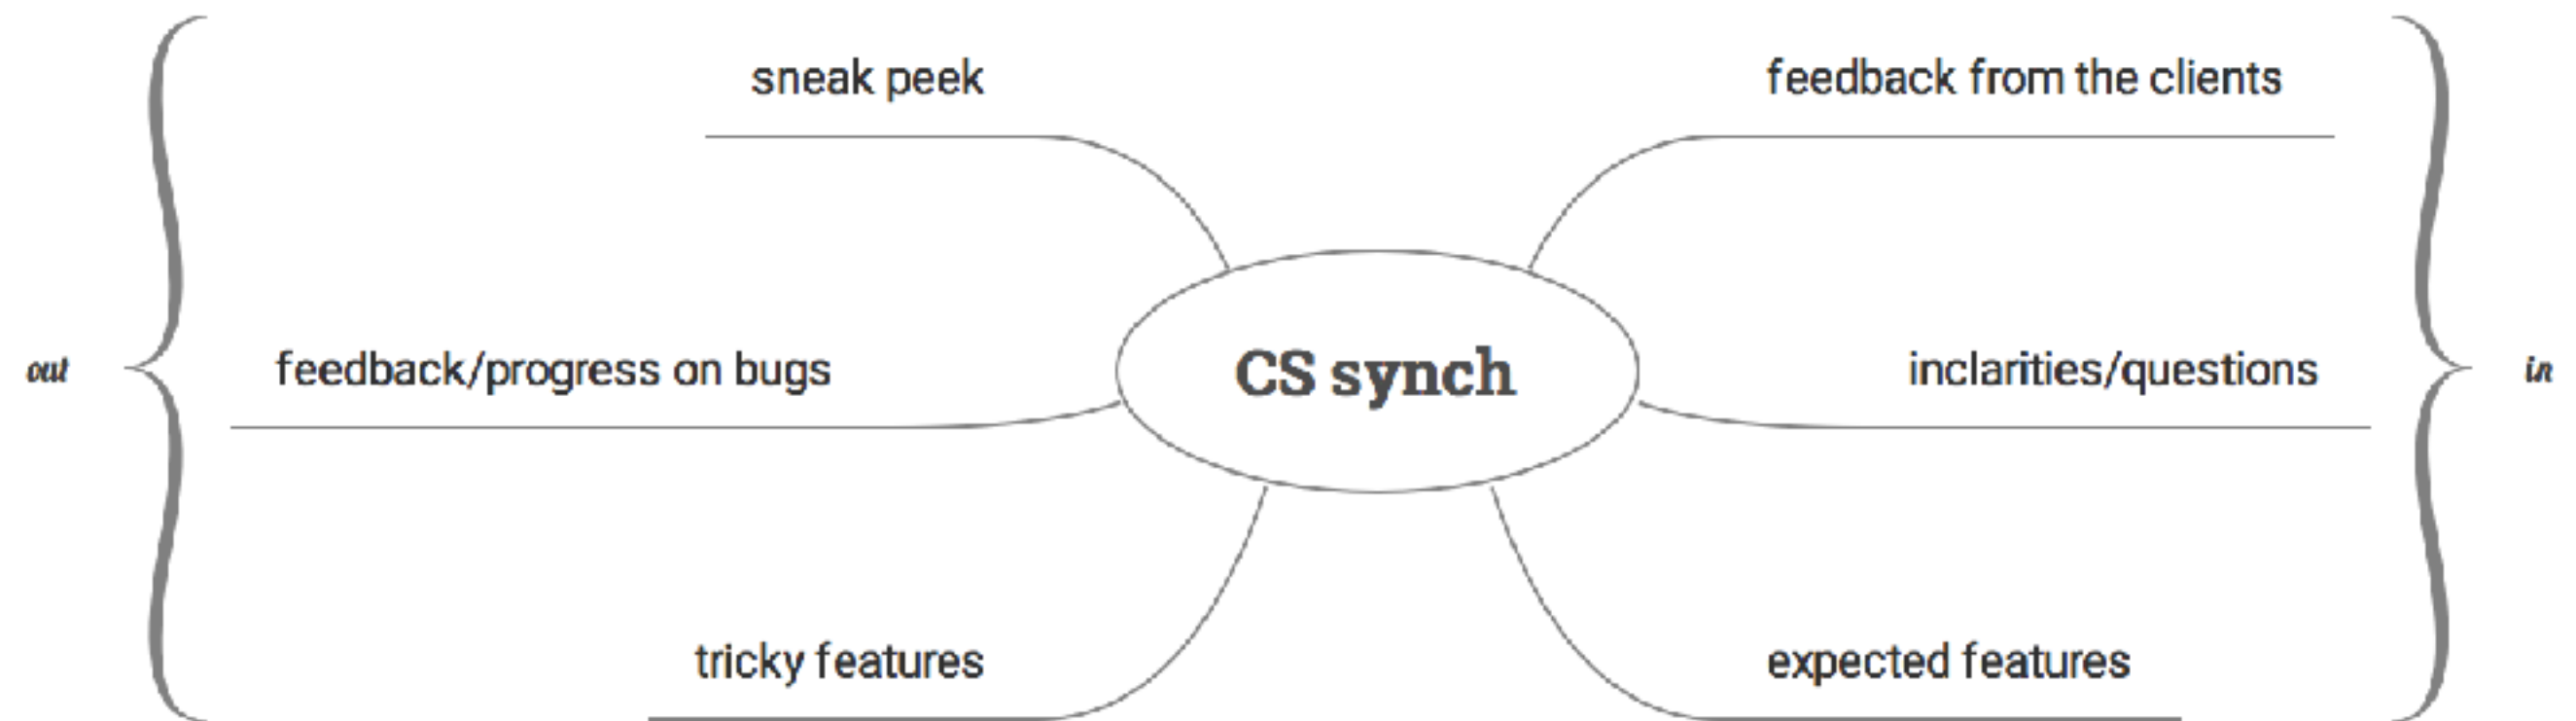

the QA as the hub

- cross department-view: Customer service, Sales, other departments
- train
- provide feedback about the product and expected features

Cross-department communication

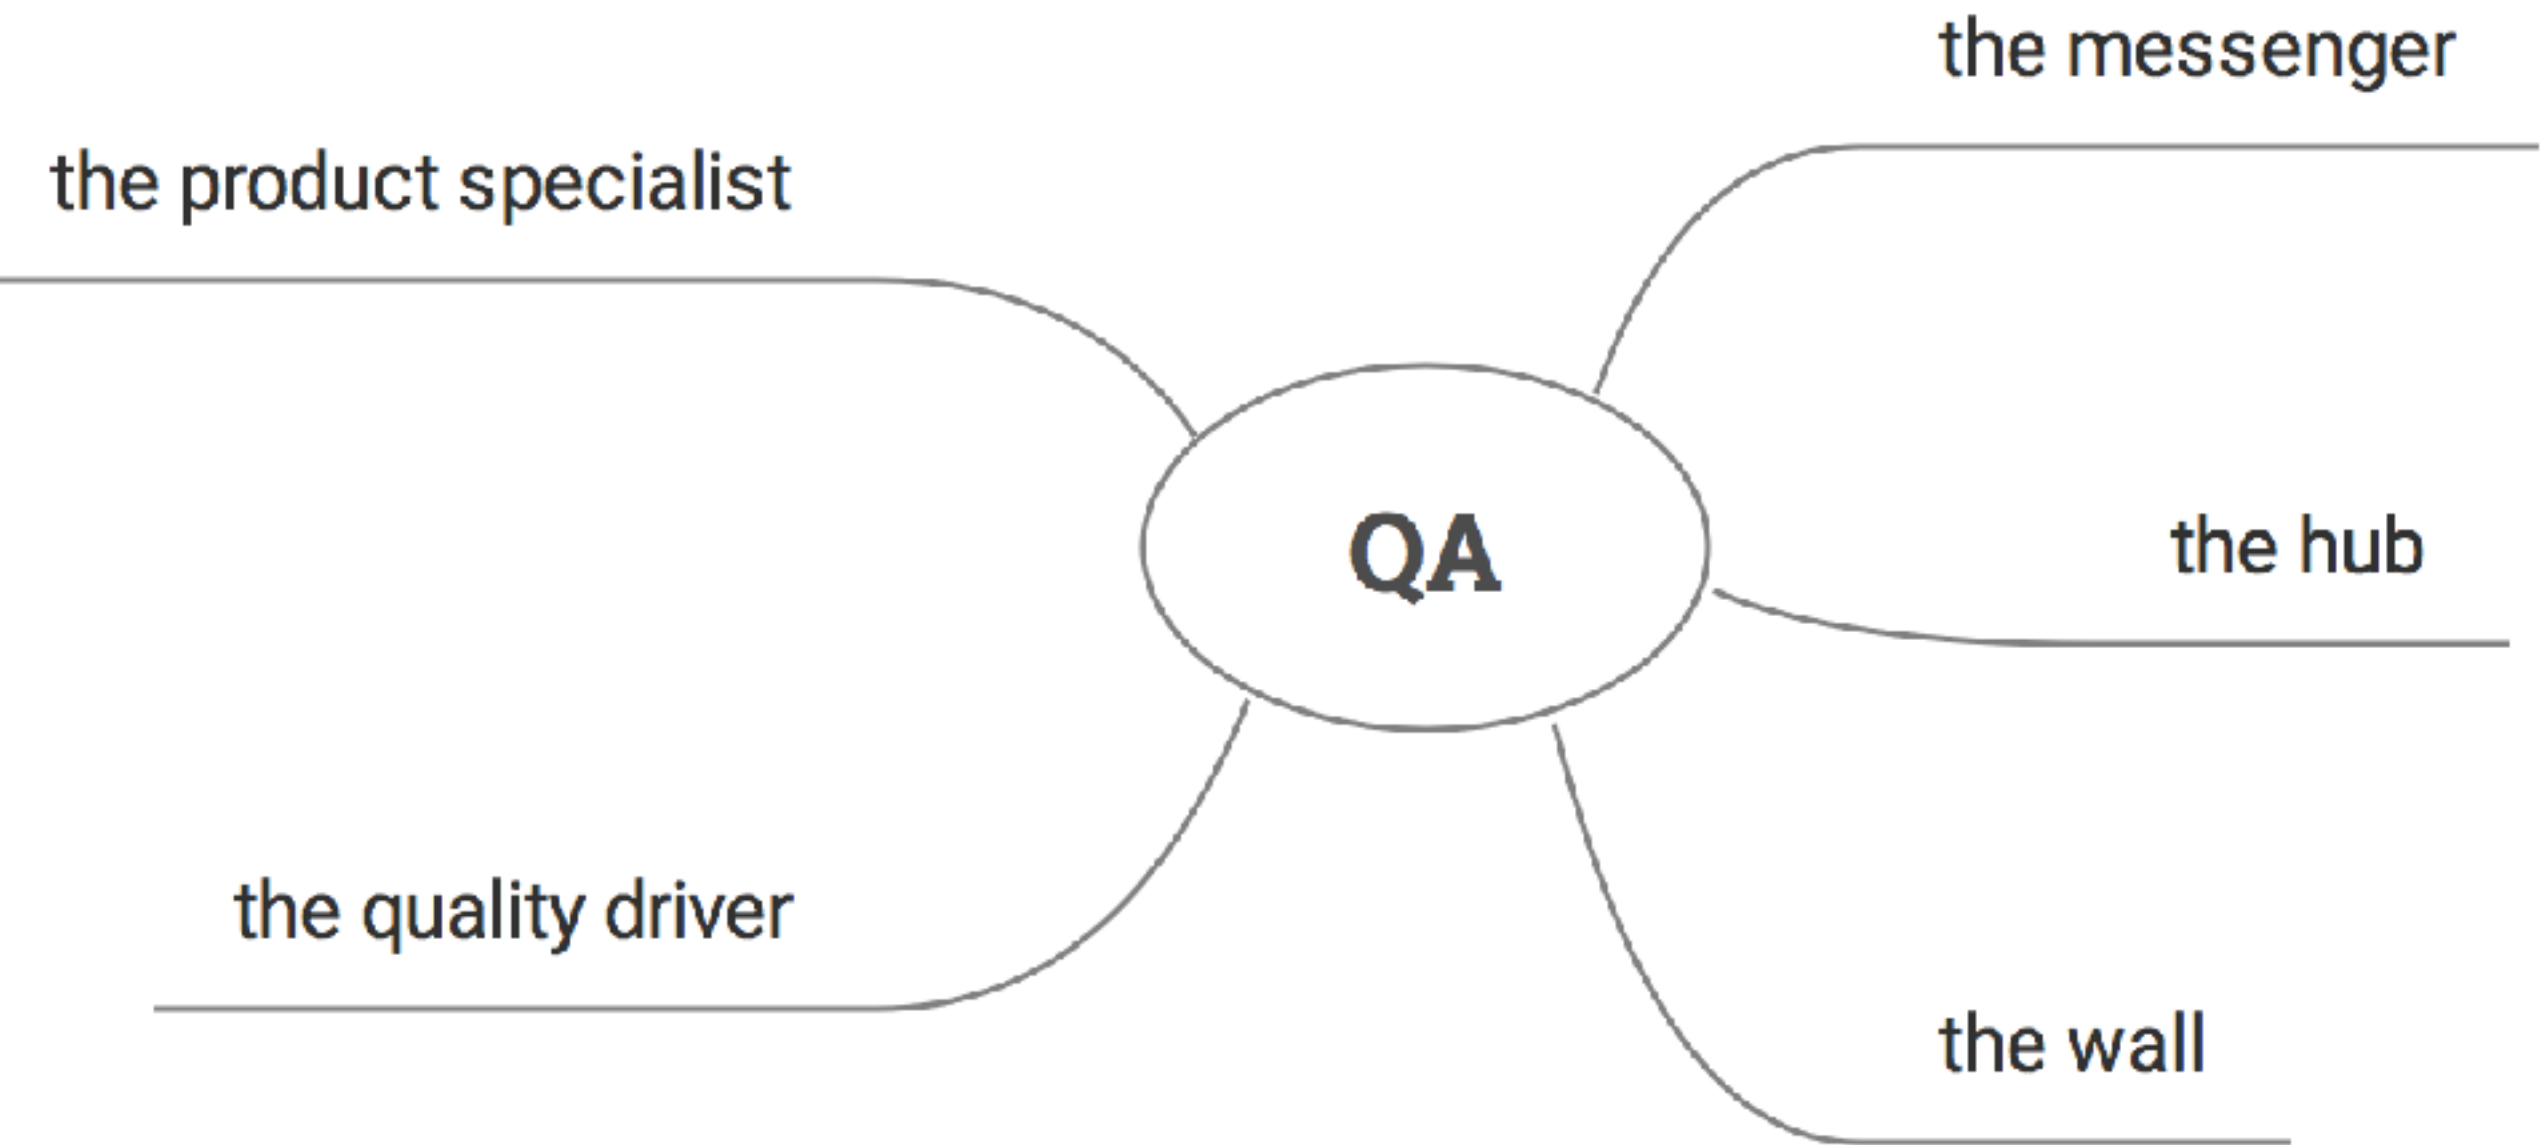

the QA as the messenger

- document finding and decisions about bugs
- evaluate and communicate the quality of the product

summary

the team game
